UNCLASSIFIED

VG Program Description

- VG is an exercise program sponsored by United States Northern Command (USNORTHCOM) and supported by the National Guard Bureau (NGB)*
- The program provides State National Guards an opportunity to improve cooperation and relationships with their regional civilian, military and federal partners in preparation for emergencies and catastrophic events

* IAW JROC Memorandum 263-06

VG Program Description

Focus: Joint Force Headquarters (JFHQ) – State’s coordination with the State Emergency Management Agency and Joint Task Force (JTF) - State in a regional response to a catastrophic event.

Characteristics:

- Tied to Current Plans
 - Identify capability and policy shortfalls
 - Work through plans and processes
- Enables joint National Guard and Interagency HS and CS operations at local, state, regional, and federal levels to improve processes, procedures, and coordination.
- Can combine CPX and FTX formats
- Seeks integration of regional partners
- Uses HSEEP friendly products

VG Program Description

- Vigilant Guard exercises support Interagency play and National Guard civil support/DSCA missions, by:
 - Employing scenarios and events where National Guard forces can interact with Local, State, and Federal agencies
 - Enabling planning efforts of civil agencies by incorporating their objectives and activities into the overall exercise
 - Providing an exercise “jumping off” point for civilian partners internal exercise events, let them leverage this as much as possible

Scenario

UNCLASSIFIED

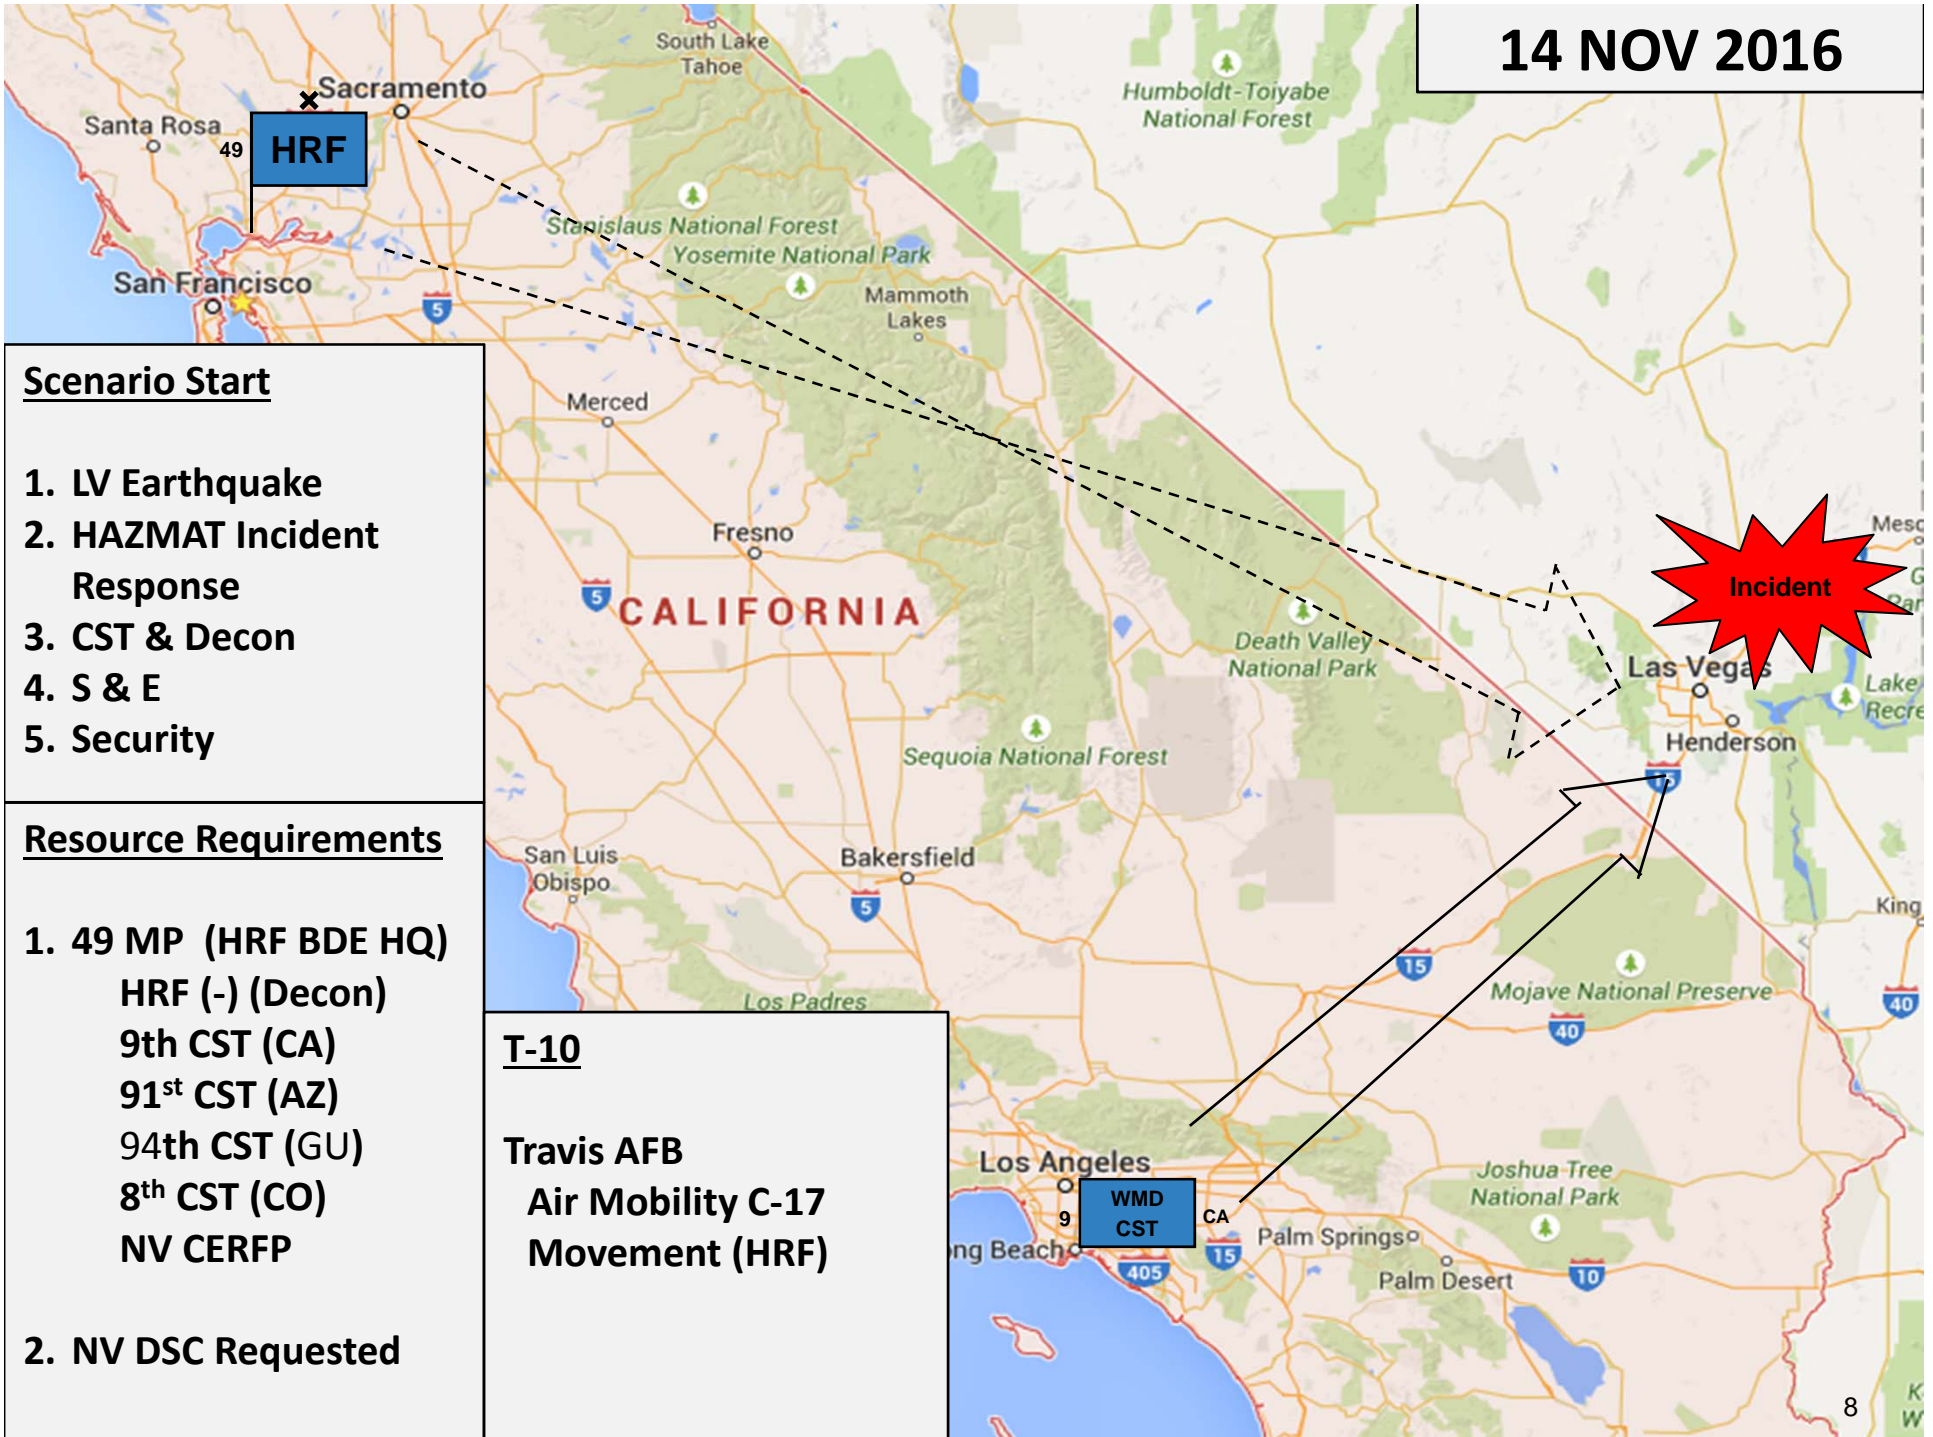

Scenario Overview

A 6.7 magnitude earthquake strikes along the Frenchman Mountain Fault with the epicenter located at the base of the Frenchman Mountain range between Lake Meade and Las Vegas. Las Vegas and the surrounding area experiences the impact with fatalities and damage to major infrastructure (airports, mass transit, bridges, airports, and roads) as well as lifelines (communications, potable water, wastewater, electrical power, communications and natural gas). The compounding damage results in fires that occur due to downed wires and ruptured gas lines. Hazardous material sites in the area may be severely damaged resulting in HAZMAT issues requiring evacuation of civilians and need for decontamination.

Scenario Overview

A 7.8 magnitude earthquake strikes along the San Andreas Fault with the epicenter located between the Salton Sea and Lake Hughes. Eight counties are heavily impacted (Imperial County, Kern County, Los Angeles County, Orange County, Riverside County, San Bernardino County, San Diego County and Ventura County) with fatalities and damage to major infrastructure (airports, mass transit, bridges, ports and roads) as well as lifelines (water, potable water, wastewater, electrical power, communications and natural gas). The damage is compounded by the fires that occur due to downed wires and ruptured gas lines. A high number of displaced citizens leaving the impacted area and first response agencies moving to administer aid will congest available ingress and egress routes.
