

NEVADA OPERATIONS CENTER (NVOC) SITREP

INCIDENT NAME: Pre-Spring Thaw
LOCATION: Nevada (Region 1, 2 and 3)
TIME OF INCIDENT: 12:00 AM on 8MAR23
INCIDENT DESCRIPTION: The Nevada Operations Center (NVOC) is partially activated per the Division of Emergency Management (DEM) Spring Thaw Plan. The purpose of this activation is to increase our efforts for monitoring and preparedness.

SITREP #: 2
SOURCE: Nevada Division of Emergency Management (DEM), Nevada Department of Transportation (NDOT), and National Weather Service (NWS) Reno and Elko

CONDITIONS

CURRENT SITUATION (as of 2:00 PM on 04APR23): Per the NWS Reno March Water Outlook, Sierra Nevada SNOTEL sites are mostly 150-250% above median peak snowpack. Spring and early summer weather will play a major role in either mitigating or exacerbating snowmelt flood potential. Mid to upper-level elevation snow melts starting in June may lead to the most significant flooding. Per the NWS Elko 2023 Spring Flood Potential for Northern Nevada Rivers and Creeks, released in March, the flood potential has probability to reach or exceed flood stages. Snow measurements this year are above normal for northeastern and central Nevada. Precipitation is also above normal for the water year.
